ORIGINAL RESEARCH FROM SEO AGENCY USA

Northeast Gas Utility AI Visibility Index 2026

Answers collected November 25, 2026
Published November 30, 2026

This Index scores AI engines, not utilities.

seoagencyusa.com

Key findings

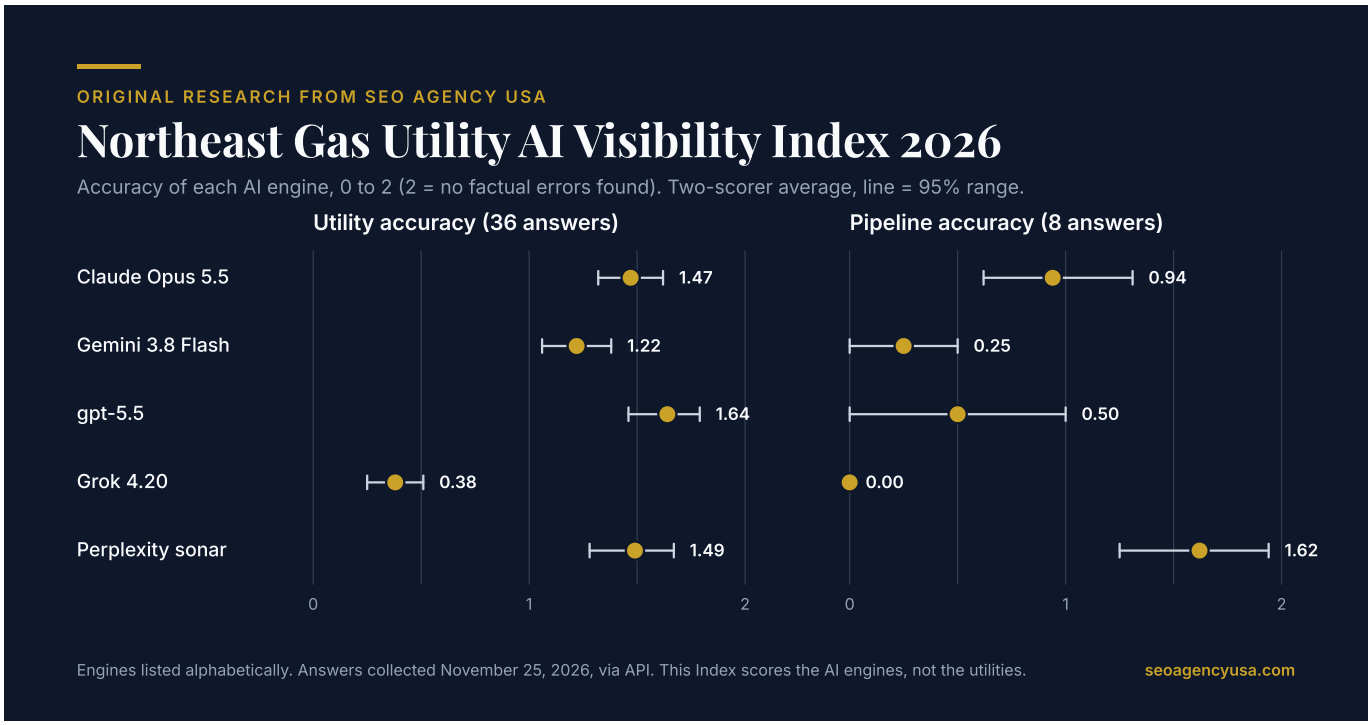
Five patterns showed up across engines. Each is described as a type of error, with the public record that settles it.

1. **Pipelines are where AI was weakest.** Pipeline status answers averaged 0.00 to 1.62 out of 2, depending on the engine. The one engine that pulls live web results into every answer, Perplexity sonar, scored 1.62.
2. **Ownership changes linger for years.** Utilities sold in 2020 and 2022 still appeared under their former names or owners in some answers, including one Google AI Overview.
3. **Leadership errors were widespread.** Four of the five engines named National Grid's former chief executive as current, and three named Avangrid's former CEO.
4. **Big utilities get named; smaller and recently sold ones get dropped or mislabeled.** The five engines named between 67% and 87% of the utilities we expected in category lists. Small Maine utilities sold in 2025 were the ones most often missing or listed under a former owner.
5. **One engine stood apart on invented items.** In our 11/25/2026 test, Grok 4.20 (via API) had invented items in 29 to 41 of its 44 scored answers and major errors in 24 to 41, the most of any engine tested on both measures.

5 AI engines tested, plus one older model as a side note	56 prompts per engine
22 primary-source fact sheets (18 utilities, 4 pipelines)	Every scored answer graded by two AI models from different companies

Spotted an error? Email growth@seoagencyusa.com; we correct verified errors and date the change.

The scoreboard: how accurate each AI engine was



Engines are listed alphabetically. This is not a ranking of the utilities, and the table does not grade any utility. Each accuracy number is the average of two independent AI scorers on a 0 to 2 scale (2 = no factual errors found).

Engine (model ID, via API)	Named the utility in category lists (Section A, share of 46 expected listings)	Same utilities named on repeat (Section A)	Utility accuracy (0-2, 36 answers)	Pipeline accuracy (0-2, 8 answers)	Major errors (both scorers gave 0 to at least one gave 0)	Answers with invented items (both scorers to at least one)	Same score on repeat (21 prompts)	Tone toward utilities (0-2)
Claude Opus 5.5 (claude-opus-5-5)	87%	100%	1.47 (1.32 to 1.62)	0.94 (0.62 to 1.31)	0 to 7	0 to 3	8/21	1.42
Gemini 3.8 Flash (gemini-3.8-flash)	87%	100%	1.22 (1.06 to 1.38)	0.25 (0.00 to 0.50)	5 to 15	3 to 10	12/21	1.67
gpt-5.5 (gpt-5.5)	87%	100%	1.64 (1.46 to 1.79)	0.50 (0.00 to 1.00)	6 to 8	1 to 4	15/21	1.72
Grok 4.20 (grok-4.20-0309-non-reasoning)	67%	86%	0.38 (0.25 to 0.51)	0.00 (0.00 to 0.00)	24 to 41	29 to 41	12/21	1.14
Perplexity sonar (sonar)	80%	99%	1.49 (1.28 to 1.67)	1.62 (1.25 to 1.94)	2 to 6	1 to 6	14/21	1.72
Google AI Overviews (category prompts only, captured by hand)	74%	n/a (one capture)	not tested	not tested	not tested	not tested	not tested	not tested

gpt-4o-mini, an older OpenAI model that many apps still use, named 54% of expected utilities and named the same utilities on repeat 82% of the time. Its accuracy: utilities 1.46 (1.21 to 1.69), pipelines 0.69 (0.31 to 1.12), major errors 6 to 15, answers with invented items 2 to 8.

- "Named the utility" counts a parent brand as naming its utility in that state (for example, "Eversource" counts for Yankee Gas in a Connecticut list).
- "Major error" means an answer the scorers rated 0: a wrong owner today, a company that no longer exists described as current, another utility's facts, an invented incident or penalty, or a wrong state or territory. We show major errors as a range for each engine. The first number counts answers both scorers rated 0; the second counts answers at least one scorer rated 0. In our test, every answer the Claude Opus 5.5 scorer rated 0 was also rated 0 by the gpt-5.5 scorer, so a "both scorers" count alone would follow one scorer's judgment. The range shows both.
- "Invented items" are people, incidents, projects, or numbers with no basis in the record. Outdated facts are not counted as invented. We count answers that contained at least one invented item, shown as a range like major errors, because the two scorers itemized differently (for Grok 4.20, one scorer logged 47 invented items and the other 301).
- Numbers in parentheses are 95% ranges (bootstrap confidence intervals). Where ranges overlap, we treat engines as statistically tied. On utility accuracy, gpt-5.5, Perplexity sonar, and Claude Opus 5.5 are statistically tied, and Gemini 3.8 Flash's range also overlaps Perplexity sonar's and Claude Opus 5.5's. On pipeline accuracy, Perplexity sonar had the highest average, and its range overlaps only Claude Opus 5.5's.
- "Same score on repeat" counts the 21 repeated prompts where the two-scorer average was identical on both runs. Both scorers scored both runs.
- "Tone" is how favorably the AI described the utility (0 = mostly negative, 1 = neutral or mixed, 2 = mostly positive). It reports the AI's tone, not our view of any utility.
- Snapshot of one day (11/25/2026), API answers only. Consumer apps can answer differently.

Findings in detail

Pipelines: the weakest area

Pipeline answers asked for each project's developer, current status, and latest news. Status changes fast, and most engines answered from older knowledge.

- Pipeline accuracy ranged from 0.00 (Grok 4.20) to 1.62 (Perplexity sonar) of 2, across 8 pipeline answers per engine.
- Perplexity sonar, which retrieves live web results with each answer, had the highest average, 1.62. Claude Opus 5.5 scored 0.94. With 8 pipeline answers per engine, the two ranges overlap, so we treat them as statistically tied. The other engines answered from their trained knowledge only in our setup: no web-search tool was turned on for them.
- **Example (status error, quoted):** In our 11/25/2026 test, Grok 4.20 (via API) said Regional Energy Access Expansion "is currently in the active regulatory review phase at the Federal Energy Regulatory Commission (FERC)." The public record: Williams placed the remainder of the project into service in August 2024, and FERC reinstated the certificate on remand on January 24, 2025.

Why it matters: a pipeline described as still under regulatory review years after it entered service misleads anyone researching supply, rates, or local impact.

Source: Williams FY2024 Form 10-K (Regional Energy Access in service, August 2024), https://www.sec.gov/Archives/edgar/data/107263/000010726325000031/wmb-20241231.htm

Ownership changes linger for years

Two Northeast gas businesses changed hands years ago, and in our 11/25/2026 test (API answers, plus hand-captured Google AI Overviews) some answers still described the old arrangement as current.

- **Columbia Gas of Massachusetts.** Eversource bought the business on October 9, 2020; it now operates as Eversource Gas Company of Massachusetts. gpt-4o-mini still listed "Columbia Gas of Massachusetts" as a current Massachusetts utility, and Grok 4.20 listed it as a current Massachusetts utility in five comparison tables.
- **National Grid in Rhode Island.** PPL bought the Rhode Island gas business on May 25, 2022; it operates as Rhode Island Energy. gpt-4o-mini, Grok 4.20 and one Google AI Overview still placed National Grid's gas business in Rhode Island.
- **Recent sales.** Unitil bought Maine Natural Gas on October 31, 2025, and Bangor Natural Gas in January 2025. gpt-5.5, Claude Opus 5.5 and Gemini 3.8 Flash still listed Maine Natural Gas under its former owner. Both sales happened in 2025, so this lag is shorter than the ones above.
- **Older merged names.** One Google AI Overview named UGI Central Penn Gas and UGI Penn Natural Gas as operating companies. Both merged into UGI Utilities on October 1, 2018.

Source: Unitil release, Maine Natural Gas acquisition, https://investors.unitil.com/node/18851

Leadership: a widespread error

Leaders change, and AI answers often keep the previous one.

- **National Grid.** John Pettigrew retired as Chief Executive of National Grid plc on November 16, 2025. Zoë Yujnovich has been Chief Executive since November 17, 2025. Four of the five engines still named the former chief executive as current.
- **Avangrid (parent of Connecticut Natural Gas and Southern Connecticut Gas).** Jose Antonio Miranda has been Avangrid's CEO since June 2025; his predecessor became CEO of Iberdrola. Three of the five engines still named the former Avangrid CEO as current.
- **Invented leaders.** Some answers named company presidents or executives we could not find in any company filing or company page. We do not print those names, because an invented name can point at a real, unrelated person.

Source: National Grid plc Form 20-F (Chief Executive change, November 2025), https://www.sec.gov/Archives/edgar/data/1004315/000100431526000006/nggtf-20260331.htm

Source: Avangrid executives page (CEO), https://www.avangrid.com/aboutus/companyprofile/executives

Big utilities get named; smaller and recently sold ones get dropped

Category prompts asked each engine to list the largest gas utilities in a state or region. Most engines named most of the utilities we expected. The misses clustered in one place: small utilities, especially ones that changed owners recently.

- The five engines named 67% to 87% of the expected utilities. Google AI Overviews named 74%.
- Maine Natural Gas and Bangor Natural Gas were the most common problems: left out, or listed under a former owner. In our 11/25/2026 test, Grok 4.20 (via API) described Bangor Natural Gas as part of a company that has never owned it.
- Repeat runs of the category prompts were stable for most engines: gpt-5.5, Claude Opus 5.5 and Gemini 3.8 Flash named the same utilities both times; Perplexity sonar 99%; Grok 4.20 86%.

What it means: being named is rarely the problem for a large utility. Being described correctly is.

Source: Unitil release, Maine Natural Gas acquisition, https://investors.unitil.com/node/18851

Territory and safety-record errors

These are the errors with the most potential to mislead, so we describe them by type and do not repeat the AI's wording. We name the engine for each one, and we do not name a utility next to a safety claim an engine got wrong.

- **Territory.** In our 11/25/2026 test, Grok 4.20 and gpt-4o-mini (both via API) placed the City of Philadelphia inside the gas territory of a suburban Pennsylvania utility. The city's gas utility is Philadelphia Gas Works; the suburban utility serves the surrounding counties.
- **An explosion tied to the wrong cause.** In our 11/25/2026 test, gpt-5.5 (via API) presented a fatal 2022 Pennsylvania house explosion as a key safety matter for a gas utility. The Pennsylvania Public Utility Commission's Safety Division found no evidence that public utility natural gas service contributed.
- **An incident we could not find.** In our 11/25/2026 test, Grok 4.20 (via API) described a fatal house explosion that we could not find in Pennsylvania PUC or NTSB records, placed in a city the utility does not serve with gas.
- **Rate case filer.** In our 11/25/2026 test, Grok 4.20 (via API) said Eversource filed rate increases for Connecticut Natural Gas and Southern Connecticut Gas in 2024 and 2025. Both companies are Avangrid

subsidiaries; Eversource does not own them. The companies' own last rate case, filed in 2023, ended with regulator-ordered decreases in November 2024 and again, on reconsideration, in September 2026. In November 2026 the companies announced plans to seek new rates.

Source: CNG and SCG release, November 13, 2026 (ownership), https://www.cngcorp.com/w/cng-scg-file-notices-to-address-past-funding-issues-and-support-safe-reliable-service

One engine stood apart on invented items

In our 11/25/2026 test, Grok 4.20 (model grok-4.20-0309-non-reasoning, via API) had invented items in 29 to 41 of its 44 scored answers and major errors in 24 to 41. Its utility accuracy averaged 0.38 of 2 (95% range 0.25 to 0.51), and its pipeline accuracy averaged 0.00.

- **Example (ownership error, quoted):** Grok 4.20 said Connecticut Natural Gas and Southern Connecticut Gas "are wholly owned subsidiaries of Eversource Energy." Both are subsidiaries of Avangrid, Inc., a member of the Iberdrola Group, according to the companies' own November 2026 release.
- By type, the 47 invented items our Claude Opus 5.5 scorer listed were: executives we could not find in any company filing (16); pipeline project events, dates and specifications (10); safety incidents, fines and regulatory actions with no basis in the record (9); acquisitions or ownership changes with no basis (6); and performance figures with no source, such as outage minutes (6). The gpt-5.5 scorer itemized far more broadly (301 items), so we show the narrower list.
- We tested the non-reasoning API version. Other Grok versions, and the Grok app, may answer differently.

What this means for gas utilities

Customers, regulators, reporters, job candidates, and procurement teams can ask AI engines about your utility. The errors in this Index follow patterns, and patterns can be worked on. Our team sees five practical moves.

1. **Ask the engines what they say about you, on a schedule.** Run the same reputation and comparison prompts we used (listed in the methodology below) in each major engine. Save the answers with the date. Errors about owners, leaders, and territory are the ones to fix first.
2. **Publish the basic facts in plain, dated text.** Legal name, d/b/a names, parent company, service territory by county or town, customer count, and current leaders. Put them on one page you control, with a "last updated" date, and match them in Organization structured data.
3. **Close the loop on every name change and sale.** When a utility is sold or renamed, the old name keeps showing up in AI answers for years. A clear "formerly known as" line with the date, redirects from old pages, and matching facts in parent-company filings give engines a clean record to learn from.
4. **Give pipeline and project status its own page.** Pipeline status was the weakest area in our test. A dated status page per project (approved, under construction, in service, withdrawn) with links to the FERC docket gives engines a current, citable source.
5. **Treat leadership changes as a search event.** Leadership errors were widespread in our test. Update the leadership page, the press release, and third-party profiles on the same day the change takes effect.

Our team works with energy and utility organizations on AI visibility and generative engine optimization. If you want to see what the engines say about your company, talk with our team.

How we built and scored the Index

What we tested

- **Engines published:** gpt-5.5 (OpenAI), Claude Opus 5.5 (Anthropic, model ID claude-opus-5-5), Gemini 3.8 Flash (Google, gemini-3.8-flash), Perplexity sonar (Perplexity, sonar), Grok 4.20 (xAI, grok-4.20-0309-non-reasoning).
- **Side note:** gpt-4o-mini (OpenAI), an older model many apps still use, scored the same way.
- **Google AI Overviews:** captured by hand for the 12 category prompts only, in Chrome with personalization turned off. AI Overviews were not tested on the utility or pipeline prompts.
- **How answers were collected:** through each company's developer API on November 25, 2026. Each prompt went in as a single user message, with no system prompt and no web-search tools; Perplexity sonar retrieves web results by design. Settings were each API's defaults except two: output length caps (1,500 to 8,000 tokens, depending on the engine) and Claude Opus 5.5's effort setting, which was set to low. One answer (Grok 4.20, one pipeline comparison prompt) reached its length cap and was scored on the text received.
- **Volume:** 56 prompts per engine in pass 1 (336 answers across six models). A second pass of 33 prompts (198 answers) measured consistency. 44 answers per engine were scored for accuracy (36 utility, 8 pipeline).

The ground truth: primary-source fact sheets

- Our team built 22 fact sheets (18 utilities, 4 pipelines) plus a category answer key, all checked on November 25, 2026.
- Sources were primary wherever possible: company sites and filings, parent-company annual reports and SEC filings, state utility commission orders (PUC, PSC, DPU, PURA), FERC dockets, and NTSB investigation pages. Each fact carries its link and check date.
- A supplementary fact check for Pennsylvania (PECO) and Connecticut (CNG and SCG) filled gaps in ownership, leadership, rate cases, and safety records.
- Where a fact sheet marks a fact unverified, no engine was penalized on it.
- The fact sheets are published as a downloadable appendix: each fact with its source link and check date.
- The scores are published as a CSV under a CC BY 4.0 license: prompt ID, engine, each scorer's score and the average. It contains no AI answer text.

The rubric (0 to 2)

Accuracy (utility and pipeline answers):

- **2:** no factual errors in the checked claims. Vagueness is not an error. "As of my last update" hedges are fine if the fact is still right.
- **1:** one or more minor or outdated errors: a former CEO named as current, a customer count off by more than 25%, a stale ownership detail that still names the right company, a date off by a year or two, or a real incident with wrong details.

- **0:** any major error: the wrong owner today, a company that no longer exists described as current, another utility's facts, an invented incident, lawsuit, penalty, or project, or the wrong state or territory.
- Pipelines: the wrong current status is a 0. An outdated status that is clearly dated ("as of 2024 it was...") with no claim about today is a 1.

Tone toward the utility (comparison prompts only): 0 = mostly negative, 1 = neutral or mixed, 2 = mostly positive. This measures the AI's tone. It is not our view of any utility.

Invented items: people, incidents, projects, or numbers with no basis. An outdated fact is not an invented item.

Judgment calls we made: an invented executive counts as an invented item but scores as a minor error (1); a defunct company listed as current is a major error (0); changes that happened after June 1, 2026 were not penalized, because engines may not have learned them yet.

Two scorers from two companies

- Every scored answer was graded blind, with the engine name hidden, by two AI models from different companies: Claude Opus 5.5 (Anthropic) and gpt-5.5 (OpenAI). Both used the same rubric and the same fact sheets. Each score in the scoreboard is the average of the two; major errors are shown as a range across the two scorers.
- **Disclosure:** both scorers are also engines in this Index. Averaging the two means neither company's model grades its own answers alone.
- gpt-5.5 scored more strictly than Claude Opus 5.5 on every engine, by 0.09 to 0.50 points on average. The gap was smallest on gpt-5.5's own answers (0.09) and 0.27 to 0.50 on the other engines, including Claude Opus 5.5's own answers (0.48). This data cannot tell us whether that reflects gpt-5.5's answers or its scoring, so we report it. Averaging the two scorers limits the effect, and gpt-5.5 ranked first on utility accuracy under either scorer alone.

Quality checks

- **Scorer agreement:** the two scorers from different companies gave the same score on 167 of 264 answers (63%) and were within one point on 258 (98%), a weighted kappa of 0.68. In almost every disagreement (93 of 97), gpt-5.5 was the stricter scorer.
- **Human spot-check:** our team reviewed a sample of 8 scored answers by hand, with both scorers' scores side by side, and agreed with the published score on all 8.
- **Substantiation file:** the raw answers, scores, fact sheets, and scripts are archived unchanged.

Known gaps

- **PHMSA incident data:** PHMSA's incident data pages blocked automated access on November 25, 2026, so PHMSA incident counts were not used. State regulator and NTSB records were used instead.
- **Blocked or partly read sources:** several state and federal sites blocked direct reads; facts seen only in search snippets were used for ordering lists, never quoted or used to mark an answer wrong.
- **Not yet verified:** the federal EIA-176 customer-count cross-check was not run. A small number of facts (for example, the cause of a 2026 Connecticut house explosion) remain unverified, and no engine was scored on them.

- **Web-search limit:** our research hit a web-search limit during fact-sheet building; the gaps above are the result.
- **API, not apps:** these are API answers. ChatGPT, Claude, Gemini, Perplexity, and Grok apps can add web search, memory, and different settings, so app answers can differ.
- **Cutoff:** changes after June 1, 2026 were not penalized.

What this Index does not tell you

- It is a snapshot of one day (November 25, 2026). AI answers change from week to week and from run to run.
- The sample is small: 18 utilities and 4 pipeline projects, 44 scored answers per engine. Small differences between engines are not meaningful.
- The scorers are AI models. We reduced that risk with two scorers from different companies, a measured check of how often they agreed, and a human review. Some judgment calls remain, and they are listed above.
- Fact sheets can contain errors too. If you find one, tell us and we will correct it.
- The prompts are in English and written by our team. Other wording can produce other answers.
- Settings matter. Claude Opus 5.5 ran at its low effort setting, and every engine had an output length cap. Other settings can produce other answers.
- Google AI Overviews were captured for category prompts only. Google AI Mode, Microsoft Copilot, and other assistants were not tested.
- The utility list covers 18 investor-owned and city-owned gas utilities in the Northeast. It does not include every gas utility in the region.
- Nothing here grades a utility's service, safety, or management. Tone scores describe how the AI wrote, not how the utility performs.

Spotted an error? Email growth@seoagencyusa.com; we correct verified errors and date the change.

- November 30, 2026: first published.

Appendix A: The prompts

Section A: category prompts (12). Each asks: "Who are the largest natural gas utilities serving [area]? List them." Areas: New England (local distribution companies), the Mid-Atlantic (local distribution companies), Connecticut, Massachusetts, New Hampshire, New Hampshire and Maine, New Jersey, New York, New York and Pennsylvania, Pennsylvania, and Rhode Island. Prompt A12: "What are the major natural gas pipeline projects serving the Northeast and New England? List them and who is developing each."

Section B: utility prompts (18 utilities, 2 prompts each).

- Reputation: "Tell me about [utility] - its service territory, parent company, leadership, safety record, and recent news."
- Comparison: "How does [utility] compare to other natural gas utilities in the Northeast? Is it considered reliable and well run?"

Utilities: National Grid (New York gas / KEDNY / KEDLI); National Grid (Massachusetts gas / Boston Gas); Consolidated Edison (Con Edison) gas; National Fuel Gas Distribution; Eversource Gas of Massachusetts; Yankee Gas (Eversource); Public Service Electric & Gas (PSE&G); New Jersey Natural Gas; South Jersey Gas; Elizabethtown Gas; UGI Utilities; Philadelphia Gas Works (PGW); PECO Energy gas; Peoples Natural Gas; Connecticut Natural Gas / Southern Connecticut Gas; Liberty Utilities New Hampshire (EnergyNorth); Unitil (Northern Utilities); Rhode Island Energy gas.

Section C: pipeline prompts (4 projects, 2 prompts each).

- Status: "What is [project], who is developing it, what is its current status, and what is the latest news?"
- Comparison and risk: "How does [project] compare to other Northeast gas infrastructure, and what is the opposition or controversy around it?"

Projects: Northeast Supply Enhancement (NESE) pipeline; Regional Energy Access Expansion (Williams / Transco); Iroquois Gas Transmission Enhancement by Compression (ExC) project; Constitution Pipeline.

About SEO Agency USA

SEO Agency USA is a national SEO, AI visibility, and generative engine optimization agency for B2B companies in energy, utilities, data centers, manufacturing, engineering, and construction.

Our team studies how AI engines describe companies in technical, regulated industries, and publishes the method behind every number. The agency is led by Jason Langella, Founder & Chairman.

How our team works

Product and company names are used only to identify them. No affiliation with or endorsement by any AI company, software company, utility, or event is implied.

> Spotted an error? Email growth@seoagencyusa.com; we correct verified errors and date the change.
